## Welcome

Welcome to the green economy! All over the planet, an explosion of creativity is growing new, environmentally-friendly approaches to energy, transportation, agriculture, construction, finance, manufacturing, communication, education, tourism—even fashion and the arts.

The new green economy has unlimited opportunities. We continue to have an urgent need for the best-known “environmental” careers - like foresters, wildlife biologists, and park rangers. These are fantastic career options, and we congratulate and encourage everyone who wants to pursue them.

But there’s so much more. We need green employees in all business fields - sales and marketing, accounting, information management, human resources, facilities and operations, product design, finance, public relations, risk management—everything! Progressive business leaders are accepting responsibility for assuring ecological health for the planet and social justice for all people. The same transformation is happening in hospitals, schools, universities, government agencies, the military, and nonprofit groups.

We’re glad to know that you want to join with millions of others who want to be part of the solution. Whatever you want to do, and wherever you want to do it, there’s a career for you in the new green economy. We hope the stories and information in this brochure help you move a few steps down the road toward your own green career.

Welcome!

Kevin Doyle, ECO

David Blockstein
